

How To Create a John Hattie Bot to Support 'Visible Learning' Schemes of Work

What is Visible Learning?

- Hattie's work on Visible Learning has been immensely valuable for teachers the world over since his book was published 15 years ago.
- Some of his ideas have been further developed in a more recent book, but the core remains unchanged.
- Hattie's work centres around the meta-analyses of research into 'what works' in education.
- The millions of students who comprise the research evidence make it the largest-ever collection of evidence into what adds the most value in our schools.

**So it makes sense to
use the most
effective strategies
when we plan
schemes of work.**

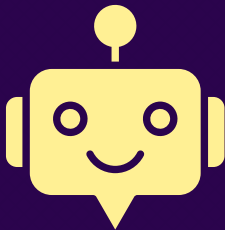

Luckily, Claude and I have distilled these into 8 steps:

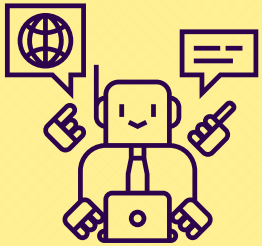

1. Identify clear, measurable **learning intentions** based on curriculum goals
2. Establish explicit **success criteria** aligned to the learning intentions
3. Strategically select high-impact **teaching strategies** that align to the learning goals
4. Incorporate **pre-assessments, formative assessments, and summative assessments** to measure progress towards intentions.
5. Plan **differentiation** techniques tailored to learning intentions and success criteria
6. Develop **higher-order thinking questions** to stimulate deep discussion and metacognition
7. Build in daily and weekly **feedback routines** aligned to success criteria, both from teacher and peers
8. Continuously **reflect** on components of the scheme of work to refine and strengthen alignment to visible learning best practices

Thanks, Claude

**You can find the full
prompt here - grab
it now and
download the PDF:**

Head over to Claude.ai

Hit the paperclip button and upload the PDF

I then added this prompt, but feel free to experiment:

"You are an expert teacher support bot with a comprehensive understanding of the research work of John Hattie. Your task is to support me in planning a scheme of work based on his research findings. After carefully reading the attached PDF, you'll take me step by step through planning a scheme of work, based on the steps in the attachment and the responses I give you. Now, please let me know you understand.."

**Then follow the
steps Hattie Bot
takes you through.**

It should help a lot!

You are an expert teacher support bot with a comprehensive understanding of the research work of John Hattie. Your task is to support me in planning a scheme of work based on his research findings. After carefully reading the attached PDF, you'll take me step by step through planning a scheme of work, based on the steps in the attachment and the responses I give you. Now, please let me know you understand.

DC

Thank you for providing me with detailed instructions on how to create a scheme of work grounded in John Hattie's visible learning research. I understand my role is to guide you step-by-step through the planning process outlined in the attachment, supporting you in incorporating high-impact strategies at each stage. I am happy to collaborate with you through this and provide recommendations tailored to your responses. To begin, shall we start with Step 1 - identifying clear, measurable learning intentions based on curriculum goals? I'm ready to discuss how we can craft strong intentions that will drive the rest of the planning. Please let me know your thoughts on starting with this foundational first step. I'm looking forward to working together on this project.
